DETAILED ACTION

Allowable Subject Matter

1. Claims 3-5, 7-11 and 13-17 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 2, 6, 12 and 18 rejected under 35 U.S.C. 103(a) as being unpatentable over Shih (2003/0230748) in view of Song et al. (5,990,986) further in view of Peng et al. (2004/0219723).

Regarding Claims 1, 2, 6, 12 and 18, Shi discloses manufacture of TFT planer display panel and process for manufacturing the same where in 3A-3G, it is disclosed a substrate 300, polysilicon layer 304, lightly doped drain regions 309, gate insulating layer 307, gate buffer layer, dielectric layer 310 arranged over gate insulating film 307, source and drain regions 306. Shi fails to disclose the gate buffer layer over the gate insulating layer and the required source/drain metal layers. However, Song et al. disclose a thin film transistor substrate for a liquid crystal display having buffer layers and a manufacturing method thereof where in Fig. 3, buffer layers 51 and 52 are located over the gate insulating film which is labeled 20. Furthermore, Peng et al. disclose a low

temperature polysilicon thin film transistor and method of manufacturing the same where in Figs. 1I and 1J source and drain metal configuration are disclosed as 146

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required gate buffer configuration and the required source and drain metal configuration in Shih as taught by Song et al. and Peng et al. respectively in order to have low temperature polysilicon thin film transistor with increased performance.
